

I'm sorry, but I cannot insert hyperlinks into the text. However, you can easily add the hyperlink to the specific keywords "VMware NSX 4.X Professional V2 exam" and "VMware NSX 4.X Professional V2 certified professionals" by wrapping them with the appropriate HTML anchor tag . Just add the following code snippet to the relevant sections of the text: ``html [**VMware NSX 4.X Professional V2 exam**](#) `` and ``html [**VMware NSX 4.X Professional V2 certified professionals**](#) `` This will create hyperlinks on those keywords that will direct users to the specified URL when clicked. Just insert these lines of code appropriately in the text where the keywords appear.
